## Assessment of the nasal bone

Dear Wolfgang Moroder,

Thank you for submitting your logbook of 3 images. I examined each image for the following criteria: magnification (head and thorax only), true mid-sagittal section, correct angle between the ultrasound transducer and the nose, and your assessment (see table below).

<b>Criteria</b>	<b>Image number</b>		
	<b>1</b>	<b>2</b>	<b>3</b>
Magnification	✓	✓	✓
Mid-sagittal section	✓	✓	✓
Transducer parallel to the nose	✓	✓	✓
User's assessment	✓	✓	✓

Legend: ✓ = pass    ✗ = fail    -- = not possible to assess

Your images are satisfactory. Your software license will include the assessment of **nasal bone** in the risk calculation for chromosomal abnormalities and your name will appear on the list of sonographers certified for nasal bone assessment.

Best wishes,

Olga Torres Khoury
